

Note:

- . Variables mapped in this atlas are listed below; in the following worksheets this variables are presented highlighted in light blue.
- . A description of each variable is provided as a comment to the column heading cell.

Use of shape files included on the CD with the data in this file.

The data in this Excel file can be used with Geographic Information System (GIS) software to replicate the maps in the Population & Housing Census Atlas of Ethiopia 2007 using the shapefiles (digital maps) included on this CD. To link the data files to the shape files, please follow the instructions for your GIS software. The data field that you should use to link the data to the appropriate shapefile is the spatial unit ID (i.e. W_CODE) that is presented typically in the first column of each worksheet. In each of the subsequent worksheets the heading for the first column includes a comment - hold your cursor over the red triangle in upper right of column heading cell to see the description of a field.

Shapefiles and raster datasets are included on the CD. The shapefiles are included simply for cartographic purposes. No data in this file is associated with these digital maps.
